Q6: City Recommender

Q7a

Act as a student in a project-based class, whose team believes that allowing AI tools in one course assignment could improve learning and creativity. Write a multi-section, professional proposal that will convince the department leadership to allow a pilot use of AI tools. One thing to note is that the department leadership is cautious and worried about academic integrity and fairness, so you should also address possible concerns for the use of AI. Do add practical steps to ensure safe and responsible usage, and avoid extreme claims about AI being safe or perfect.

Q7b

Act as a neighborhood cafe who is trying to promote a new line of sugar-free desserts. Create an engaging Instagram post with a short caption, promotional description, and three hashtag suggestions under 120 words. The context of the cafe is that it is small and relies on locals who want healthier snack options. The message should appeal to everyday customers, not make any medical promises, and try to encourage people to come and try the desserts.
